

MANAS SUPEKAR

| *Aspiring Data Analyst and data scientist* |

+91 9021086915 • Manassupekar45@gmail.com • [portfolio](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

Final-year Data Science & Analytics student with a strong foundation in Python, SQL, data analysis, statistical concepts, data visualization, and Generative AI. Experienced in developing data-driven and AI-powered solutions across exploratory data analysis, visualization, machine learning, and application development, with hands-on experience using Power BI and Tableau. Led the development of an AI-powered mental health awareness and tracking prototype, taking responsibility for the overall solution and prototype development. Secured Top 3 positions at Smart India Hackathon in both 2024 and 2025, demonstrating strong problem-solving, leadership, and execution skills. Adaptable and quick to learn, with a goal of applying data and AI to solve real-world problems and contribute to impactful solutions in a leading organization.

EDUCATION

Bachelor's in Data Science & Analytics (Minor: AI) | VESASC2024 – 2027

HSC – Science | SMT. CHM College2022 – 2024

TECHNICAL SKILLS

Programming: Python, SQL, R

Data Science: Data Analysis, Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Feature Engineering, Predictive Modeling

Machine Learning: Supervised Learning, Unsupervised Learning, Model Training, Model Evaluation, Feature Selection, Hyperparameter Optimization

Artificial Intelligence: Deep Learning, Natural Language Processing (NLP), Computer Vision, Generative AI, Large Language Models (LLMs), RAG, Prompt Engineering

Data Visualization: Power BI, Tableau, Data Visualization, Dashboard Development

Databases: MySQL, PostgreSQL, MongoDB

MLOps & Deployment: Model Deployment, MLflow, Docker, REST APIs, FastAPI

Development & Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code

PROJECTS

Zomato Dataset – Exploratory Data Analysis | Academic Project2024

Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook

- Cleaned and preprocessed a real-world sales dataset — handled missing values, fixed data types, and detected outliers across 10,000+ records to ensure analytical reliability.
- Uncovered 3 key revenue drivers and seasonal demand patterns through univariate and bivariate analysis, producing insights directly applicable to inventory and marketing decisions.
- Built reusable Pandas pipelines for recurring data cleaning tasks, reducing future preprocessing effort significantly.
- Delivered a concise visual report using Matplotlib and Seaborn — including top product categories, revenue trends, and customer behaviour charts.

DigiSeva – Local Service Booking Platform | Personal Project2024

Python, SQL, Web Development

- Designed and deployed a full-stack platform connecting local household service workers with customers, featuring location-based professional matching.
- Architected a 3-role system (Customer, Professional, Admin) with separate dashboards, booking workflows, and a complete login-to-confirmation flow.
- Managed all user data, bookings, reviews, and ratings using a SQL backend; enforced data integrity through validation logic.

Mental Health Awareness & Tracker | *Smart India Hackathon 2025*2025

Python, AI Integration, Full-Stack, Data Visualisation [link](#):

- Designed a clinical-style questionnaire engine to assess anxiety, depression, and stress syndromes — computing a danger level score that categorised users into Low, Moderate, and High risk tiers, driving all downstream features including alerts, recommendations, and appointment triggers.
- Developed a custom rule-based chatbot in Python that adapted responses based on the user's danger level score — suggesting breathing and physical exercises for mild stress, sending escalation alerts for high-risk users, surfacing emergency helpline numbers, and providing a non-judgmental conversational space to help users open up about their mental state.
- Delivered a full patient journey within one platform — interactive mood-tracking dashboards with trend visualisations, a reward system (points and badges) to drive daily check-in engagement, and an in-app appointment booking module for users flagged as moderate-to-high risk.

Newspaper & Magazine Title Registry | *Smart India Hackathon 2024 – College Round*2024

Python

- Built a Python system to query a database for duplicate newspaper/magazine titles and auto-register new entries — preventing duplicate records with validation logic.

Point of Sale (POS) System | *Academic Project*2024

- Developed a functional POS system in Python simulating retail billing, item management, and transaction processing.

HACKATHONS & COMPETITIONS

Smart India Hackathon 2025 — Top 3|Built an AI-powered mental health awareness platform with mood tracking, risk assessment, and a rule-based chatbot.

Smart India Hackathon 2024 — Top 3|Built a newspaper and magazine title registry system in Python; competed at college round.

CODE-A-THON, ALGORITHM MY 2k25 —Competitive coding event, Vidyalandkar Institute of Technology, Jan 2025.

CERTIFICATIONS

- Data Analytics Job Simulation – Deloitte (Forage)
- Data Analyst Skill Certification – One Roadmap
